Team Description: Allen Vanguard is a world leader in Remotely Operated Vehicles (ROV) for Counter-Terror and Counter-IED operations. The company is renowned for its Digital Vanguard and larger Defender robot systems. These two systems have been deployed by military and police agencies worldwide. Both systems are extremely capable robots that can perform bomb disposal activities, such as searching, disruption and other render safe procedures. Each robot can be integrated with various disruptor systems and assist with numerous tasks required for disposal of an Improvised Explosive Device (IED). Each system can be fitted with Chemical-Biological sensors and integrate with Allen Vanguard's CBRN Track software to help mitigate the effects of a CBRN agent and reduce the risks to officials and public on site.

Allen Vanguard recently introduced its new 2G Command Console to control the deployment of the Digital Vanguard and Defender. This sophisticated, rugged and handheld unit allows the operator to control two digitally-controlled ROVs during the same mission using one command unit.

Sponsors: Allen-Vanguard Corporation

Selection of scenario:

1. Reconnaissance and surveillance
2. Camp security
3. Transport
4. Mule
5. EOD
